### **DETAILED ACTION**

This communication is in response to election/restriction received on 06/23/05.

The applicant has canceled claims 10 – 13.

### ***Allowable Subject Matter***

Claims 1 – 9 are allowed.

The following is an examiner's statement of reasons for allowance: As to claims 1 – 5 and 8 - 9, the prior art fails to show a method for determining position of a target moving relative to a magnetic sensor including the steps of calculating a preselected number of mutually spaced voltage levels, each said voltage level corresponding to a respective voltage level of the at least one linear slope; and generating a plurality of position pulses, each position pulse being generated when the voltage level of the output of the magnetic sensor has a predetermined relationship with respect to a respective calculated voltage level on the at least one linear slope. These features taken together with the other limitations of the claims renders the claims allowable over prior art. As to claims 6 – 7, the prior art fails to show a method for determining position of a target moving relative to a magnetic sensor including the steps of calculating a voltage level when the preset number of pitches has occurred, wherein the voltage level corresponds to a respective voltage level of the at least one linear slope; and generating a position pulse when the voltage level of the output of the magnetic sensor has a predetermined relationship with respect to the calculated voltage level on the at least

one linear slope. These features taken together with the other limitations of the claim renders the claims allowable over prior art.

***Prior Art of Record***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Schroeder (6,486,657) is cited for its disclosure of malfunction detector for magnetoresistor speed and position sensors.

Schroeder et al. (6,577,123) is cited for its disclosure of a linear position sensor assembly.

Omekanda et al. (6,894,486) is cited for its disclosure of a magnetic encoder with double frequency output.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
